

The AI-Fueled Analytics Platform

As a data modernization project owner, you’re probably fed up with legacy obstacles causing you to play catch up. Technical debt, skillset misalignment, lack of advanced tooling, and ill-equipped data warehouses can mean your organization is unprepared for today (let alone the future!). That’s where we come in. The GoodData platform plays well with your existing stack, embraces open standards, is easy to scale, and offers fast time to value. It is a modern cloud-based platform, ready for tomorrow’s analytical needs.

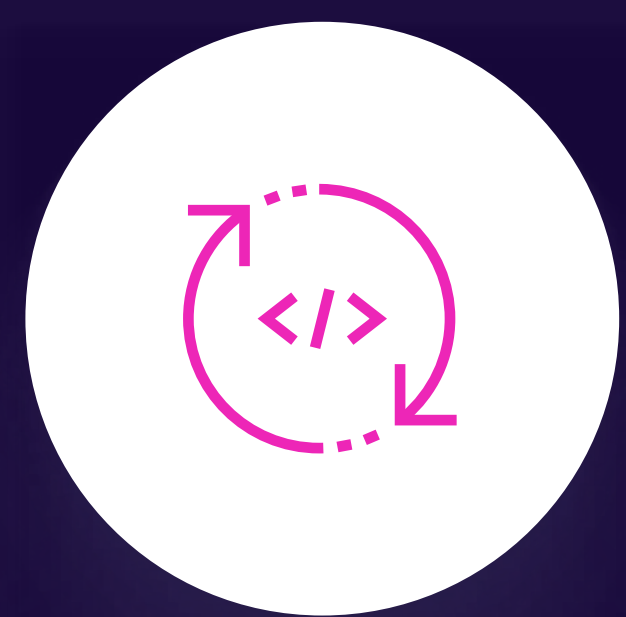

With GoodData Cloud you can:

Integrate with your existing tech stack:

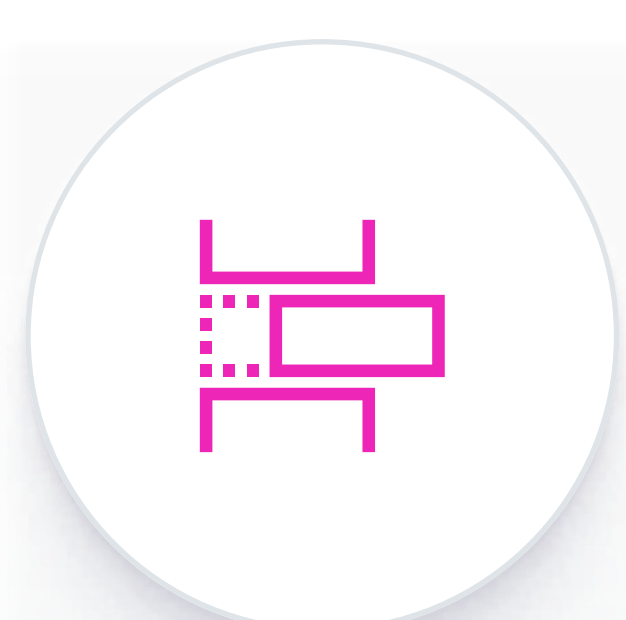

The platform easily integrates with other tools thanks to our APIs, SDKs, and headless approach. Connect with dbt, Snowflake, databricks, Meltano, and other tools you own today, or will own tomorrow.

Take advantage of our Analytics as Code approach:

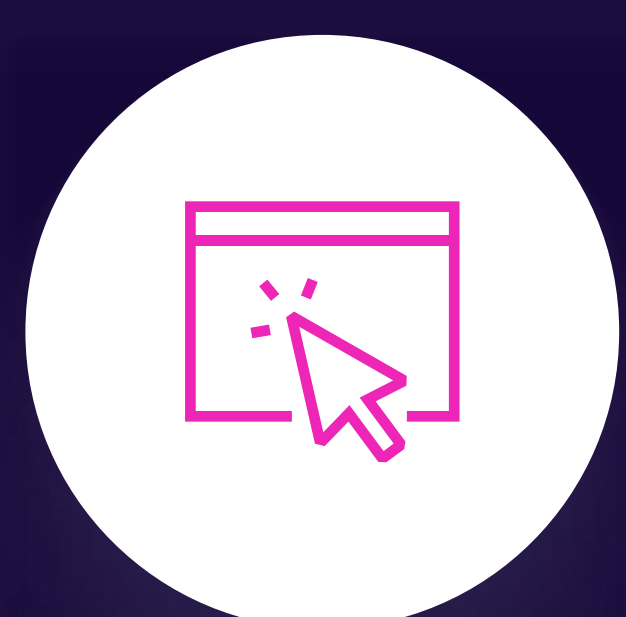

Automate deployment, testing, and repetitive tasks using our AI-powered developer tools and ‘as code’ workflows. Integrate analytics with CI/CD pipelines to automate development.

Embed into apps, web portals, and workflows:

Use either React SDK, Web Components, or iFrame, to seamlessly integrate analytics into any data product or portal — including visualizations, interactivity, and drag-and-drop tooling.

Empower end users:

Drag-and-drop UI allows non-tech users to create and customize their own charts and dashboards. AI-powered features like forecasting, key driver analysis, and NLQ mean faster insights and faster decisions.

Scale your analytics with our multi-tenant architecture:

Easily accommodate increases in data volume, end users, and business partners to meet current and future business needs (without sky-rocketing costs).

Get up and running fast and experience rapid ROI:

Most complex GoodData deployments take just 6 –12 weeks to implement. Customers report an average return of \$4 for every dollar invested in the platform.

These are just some of the ways the GoodData platform ensures your analytics are future-ready. To learn more, [request a demo today.](#)

About GoodData

GoodData is the leading cloud-based data and analytics platform, bringing AI-fueled data-driven decision-making to organizations across the globe. With a platform that leverages the potential of automation and AI, GoodData empowers its customers to make data analytics available to every single end user via real-time, self-service data insights right at the point of work. Over 140,000 of the world’s top businesses and 3.2 million users rely on GoodData in order to drive meaningful change and achieve more through data.
